CORE COMPETENCIES

AI Cost Reduction

Operational Glue Engineering

Cross-Dept Automation

SaaS Stack Integration

CRM & Billing Workflows

LLM Orchestration

Python Scripting

SQL Data Pipelines

Rapid Context-Switching

High-Autonomy Execution

TECH STACK

► Python · JavaScript (Node.js)

► SQL · PostgreSQL · Supabase

► OpenAI API · Claude API · Gemini

► Zapier · Make · n8n

► REST APIs · Webhooks · JSON

► ChargeBee · CRM Platforms

► Docker · GitHub · CLI

AI TOOLS APPLIED

► LLM-powered call coaching

► Real-time compliance detection

► Automated lead qualification

► AI-driven documentation gen

PROFESSIONAL SUMMARY

Operations-focused AI engineer who builds the **technical glue that connects ad tech, CRM, billing, and marketing platforms** into unified, AI-augmented workflows. Track record of ruthlessly identifying automation opportunities—then executing them. Eliminated \$160k/month in operational overhead by unifying 11 production platforms for 300 agents under a single AI layer. Comfortable owning the full automation lifecycle across departments, handling sensitive data, and rapidly context-switching between billing pipelines, compliance systems, and LLM integrations.

KEY ACHIEVEMENTS

- ✓ Built CCM Enrollment Intelligence System: AI operational layer connecting 11 platforms (CRM, billing, compliance, telephony) via REST APIs
- ✓ Eliminated \$160k/month in operating costs by replacing manual agent workflows with Python + LLM-driven automation
- ✓ Reduced agent onboarding from 4 weeks to 3–5 days by consolidating 11 disparate SaaS tools into one unified interface
- ✓ Built real-time compliance engine using LLM inference over live call transcripts — zero compliance failures post-deployment

TECHNICAL EXPERIENCE

Founder & AI Operations Architect

Jaws AI 911 (jawsai911.com)

2024 – Present

- ◆ Builds AI-powered operational systems for clients using **Python, REST APIs, OpenAI/Claude APIs, and n8n** — connecting CRMs, ad platforms, billing tools, and marketing stacks into automated pipelines.
- ◆ Designs SQL (Supabase/PostgreSQL) schemas to support multi-source data ingestion, customer tracking, and real-time operational reporting across client businesses.
- ◆ Deploys LLM orchestration layers that **reduce operating costs** by replacing manual review, classification, and routing tasks with structured AI inference pipelines.
- ◆ Operates with high autonomy across multiple client environments simultaneously — handling sensitive financial and customer data with strict access controls and audit logging.

Director of Systems & AI Operations

Complete Care Marketing (CCM) / TailorMade Insurance Group

2022 – 2025

- ◆ Architected the CCM Enrollment Intelligence System — a **cross-departmental AI operations layer** unifying 11 SaaS platforms (Sunfire, MARX, EnrollHere, telephony, CRM, billing) for 300 Medicare agents via Python scripts and REST API integrations.
- ◆ Built and maintained SQL data pipelines (Supabase/PostgreSQL) that aggregated enrollment data, compliance flags, and agent performance metrics into a real-time operational dashboard.
- ◆ Deployed LLM-based live call coaching: ingested real-time transcripts, applied compliance rules via structured prompts, and fired verbatim guidance to agents — eliminating compliance failures at scale.
- ◆ Identified and automated the top friction points across billing, CRM updates, and compliance auditing, saving **\$160k+/month** in manual labor and error remediation costs.

Founder

SNG Cycles

2023 – Present

- ◆ Leveraged AI-driven pipelines for **technical documentation generation**, parts catalog management, and vendor data integration using Python and PostgreSQL.
