Cognizant

Agentic AI Process Implementation Consultant – Healthcare

Dear Cognizant Team,

Most organizations talk about Agentic AI as a future state. I talk about it as a live deployment. Over the last year, I've moved beyond experimentation into building and implementing high-stakes AI workflow systems in regulated healthcare environments. I don't just design the theory; I build the agentic layers that solve real operational friction.

I am a founder-led operations expert who arrived at technology through the lens of Medicare and Healthcare delivery. I spent years in the trenches of Medicare sales and operations, managing teams and navigating the "eleven-system stack" that kills efficiency and member experience. I learned to build the technology because the existing tools weren't solving the problem of live, compliant execution.

The ****Complete Care Marketing (CCM) platform**** is my proof of concept. I designed and built an Enrollment Intelligence System that serves as a single unified intelligence layer for agents. It doesn't just surface data; it uses agentic logic to monitor live calls, detect compliance risk in real-time, and fire verbatim guidance exactly when it's needed. It's a system that ramped new hires in 3-5 days instead of 4 weeks and structurally eliminated non-compliant enrollments. This isn't just a "better CRM"—it's an agentic partner that rides along with the human workforce.

I'm applying to Cognizant because you are the bridge between these types of AI innovations and the world's largest healthcare payers and providers. You need implementation consultants who can walk into a hospital or an insurance carrier and not only speak the language of AI but also demonstrate a live, proven portfolio of how it works in the real world. I can show them exactly how an agentic workflow reduces training costs by \$160k/month for a 300-agent team because I've already done it.

I own the implementation. As a consultant, my value lies in the ability to identify a friction point, design the agentic solution, and lead the change management required to make it stick. I understand the stakeholder alignment, the regulatory hurdles, and the human-AI collaboration dynamics that determine whether a project succeeds or becomes shelfware.

Cognizant is leading the way in Agentic AI for healthcare. I want to bring my experience building these systems to your clients—helping them move from "AI curiosity" to "AI-native operations" with speed and accountability.

I would welcome the opportunity to discuss how my work with the CCM platform and my background in healthcare operations can drive value for Cognizant's healthcare consulting practice.

Sincerely,

Bryan Jaworski
