Devoted Health

AI Transformation & Operations Lead

Dear Devoted Health Team,

I spent over five years as a Medicare sales agent. Not managing agents — being one. On the phone, every call, fumbling through the same broken stack as everyone else in the room. Eleven systems open. A compliance process that dragged out every call. And by the time you got to the close, the beneficiary had already mentally checked out — too much friction, too many transitions, too much time. You hoped you covered everything correctly. You were never sure.

In Medicare, conversion is king and retention is queen. I watched both get killed every day by a process nobody had fixed. And I understood something most people in this industry don't fully articulate: when a beneficiary has a seamless, memorable enrollment experience — when your agent was organized, confident, and easy to work with — that client doesn't switch when a competitor calls them three months later offering ten dollars more on a food card. They remember how easy it was with you. They stay. That loyalty isn't luck. It's the product of an experience worth remembering.

The realization was clear: for most industries, it's either absorb AI or get absorbed by it. I absorbed it. In the first two weeks I read three prompt engineering books cover to cover. Over the following year I logged over a thousand hours of R&D — not just in Medicare, but across a second business built entirely on AI systems, where we have since verified we built something no one else has done. That is what the new frontier looks like, and that is where I operate.

The moment I knew I had the knowledge to build that environment — to create that experience structurally, not by hoping agents happened to be good that day — I went to work. I built Complete Care in 36 hours. One session. I didn't leave my desk for 13.

Complete Care is the Enrollment Intelligence System I designed and built at Complete Care Marketing Inc. It replaces eleven open platforms with a single unified intelligence layer: EnrollHere, TrueTrack, MARX, Sunfire, SharePoint, UHone, medication lookup, and every carrier portal — one screen, real time, every system talking to each other while the agent stays in the conversation. The compliance engine doesn't ask agents to remember protocol. It monitors every live call, detects risk the moment it appears, fires an alert, locks the enrollment, surfaces the exact required verbatim language, and unlocks only after the agent confirms delivery — creating a complete, auto-timestamped audit trail with zero manual effort. Non-compliant enrollments become structurally impossible.

The Complete Care Virtual Coach rides every call with the agent — real-time guidance, objection handling, payer rule intelligence, delivered at the exact moment it's needed. For a team of 300 agents, the training savings alone exceed \$160,000 per month. New hires ramp in three to five days instead of four weeks. Agents stay longer because the job is no longer a battle against their own tools. And clients stay longer because the experience was worth staying for.

I'm applying to Devoted Health because you are building the same thing — AI-assisted workflows that have to perform correctly on every call, for Medicare members who deserve to be handled well. The difference between my background and most candidates you'll see is this: I didn't arrive at this problem from a technology direction and learn Medicare. I arrived from Medicare and learned to build the technology. I know what breaks on a live call, why it breaks, and what it costs — in compliance risk, in lost revenue, and in the member's experience of the moment they trusted someone with their healthcare.

I own outcomes. I am a founder. When something doesn't perform, I don't produce a recommendation and move on. I find what broke, understand why, fix it, and verify the fix held. That is the accountability this role requires and it is the only way I know how to operate.

Devoted Health's mission is to give Medicare members a genuinely better experience. I know who those members are. I know what they need on a call. I know what it costs them when the system fails. I want to help make those AI workflows perform at the standard they deserve — in a place where getting it right actually matters.

I would welcome the opportunity to go deeper on how my experience with Medicare AI systems applies to what Devoted Health is building for its members.

Sincerely,
