Production Monitoring

Client-Facing Delivery

TECH STACK

- ▶ n8n (self-hosted & cloud)
- ▶ Make (Integromat) · Zapier
- ▶ REST APIs · Webhooks · JSON
- ▶ Claude API · OpenAI API
- ▶ SQL · PostgreSQL · Supabase
- ▶ Python · JavaScript (Node.js)
- ▶ Docker · GitHub · CLI

LIFECYCLE PHASES OWNED

- ▶ Requirements & scope definition
- ▶ Flow mapping & data modeling
- ▶ Build, config & integration
- ▶ Testing & error simulation
- ▶ Deployment & monitoring

PROFESSIONAL SUMMARY

Full-lifecycle workflow automation specialist with production experience across **n8n, Make, Zapier, REST APIs, and LLM integrations (Claude API, OpenAI API)**. Owns every phase from requirements gathering and flow mapping through build, testing, deployment, and ongoing monitoring. Flagship build: the CCM Enrollment Intelligence System — a multi-platform automation architecture serving 300 live users across 11 integrated APIs, with zero-failure error handling, structured logging, and real-time compliance monitoring built in from day one.

KEY ACHIEVEMENTS

- ✓ Designed and deployed CCM: 11-platform workflow architecture with full error handling, retry logic, and structured audit logs
- ✓ Built real-time LLM workflow (Claude API) over live call data — fired compliance guidance with sub-second latency, zero failures
- ✓ Owned complete lifecycle on all automations: scoped requirements with stakeholders, mapped flows, built, tested, deployed, monitored
- ✓ Delivered \$160k/month in savings and 80% onboarding reduction through systematic workflow consolidation across 11 tools

TECHNICAL EXPERIENCE

Founder & Automation Specialist

2024 – Present

Jaws AI 911 (jawsai911.com)

- ◆ Delivers end-to-end workflow automation for clients using **n8n, Make, Zapier, REST APIs, and Claude/OpenAI APIs** — gathering client requirements, mapping data flows, building integrations, and monitoring production deployments.
- ◆ Implements robust **error handling, retry logic, and structured logging** on every production workflow — ensuring failures are caught, surfaced, and resolved without manual intervention.
- ◆ Builds multi-step LLM workflows using Claude API and OpenAI API: structured JSON outputs, prompt chaining, conditional branching, and automated fallback paths.
- ◆ Manages self-hosted n8n infrastructure (Docker, CLI) alongside cloud-based Make and Zapier implementations — choosing the right tool based on client stack, data sensitivity, and latency requirements.

Director of Systems — Automation Lead

2022 – 2025

Complete Care Marketing (CCM) / TailorMade Insurance Group

- ◆ Gathered requirements from operations, compliance, and training stakeholders; translated business rules into **detailed workflow specs** and data flow diagrams before writing a single integration.
- ◆ Built and configured the CCM Enrollment Intelligence System — a production n8n + REST API architecture connecting 11 platforms (Sunfire, MARX, EnrollHere, CRM, telephony, billing) with structured error handling and event-based retry logic throughout.
- ◆ Integrated Claude API for real-time call transcript processing: structured prompts, JSON response parsing, conditional routing, and audit log writes on every inference call.
- ◆ Owned post-deployment monitoring and iteration — tracked workflow execution rates, flagged anomalies in structured logs, and shipped incremental improvements based on production data for 300 concurrent users.
