PROFESSIONAL SUMMARY

Automation builder and AI systems architect who designs and ships intelligent workflow systems for real operational environments — not proofs of concept. Built and deployed a full AI-powered enrollment platform unifying 11 systems for 300 agents in a regulated industry. Actively running Jaws AI 911, an automation consulting practice delivering n8n, Make, Zapier, and API-integrated workflow systems for founders and operations teams. **Works with stakeholders to understand the problem first, then builds systems that translate cleanly into how teams actually operate — and stays engaged through deployment and adoption.**

CURRENT CONSULTING PRACTICE

Founder & AI Automation Consultant

2024 – Present

Jaws AI 911 · AI Workflow Automation · jawsai911.com

- ◆ Designs and deploys intelligent automation workflows for business clients — **n8n, Make, Zapier, REST APIs, Supabase/PostgreSQL** — connected to LLM layers using Claude and OpenAI APIs for decision-making, content generation, and real-time processing.
- ◆ Works directly with founders and operations stakeholders through discovery sessions to map current processes, identify automation leverage points, and architect solutions that reduce manual work without creating fragile systems.
- ◆ **Translates complex workflow logic into clear, actionable briefs** for non-technical clients — ensuring they understand what's being built, why, and how to operate it after handoff.
- ◆ Builds end-to-end: scoping, architecture, build, testing, deployment, documentation, and client enablement — no hand-off gaps.

ENTERPRISE AUTOMATION CASE STUDY

AI Systems Architect — CCM Enrollment Intelligence System

2023 – Present

Complete Care Marketing Inc. · 300-Agent Medicare Contact Center

- ◆ Designed and built the CCM Enrollment Intelligence System — a custom AI platform that **unified 11 separate platforms** (enrollment, compliance, CRM, carrier portals, medication lookup, coaching) into a single real-time interface for 300 agents.
- ◆ Integrated data across disparate systems via **REST APIs, webhooks, and custom workflow automation** — replacing manual tab-switching and copy-paste workflows with live, synchronized data flows.
- ◆ Built a **real-time compliance engine** that monitors live calls, detects risk triggers, fires targeted alerts, surfaces required verbatim language, and auto-generates timestamped audit logs — all without agent-side manual action.
- ◆ Deployed a **live call coaching module** powered by LLM orchestration — delivering contextual guidance, objection handling, and payer intelligence at the exact moment it's relevant in the call flow.
- ◆ Result: **\$160k/month in operational savings**, 80% reduction in new-hire ramp time, zero compliance failures post-launch, full adoption across 300 users.

Operations & Sales Technology Lead

2022 – 2025

TailorMade Insurance Group · Medicare Contact Center

- ◆ Managed CRM systems, contact center technology stack, and process automation tooling across a high-volume sales operation. Drove adoption of new platforms and workflow changes across the team.
- ◆ Built reporting pipelines, QA automation, and performance dashboards that surfaced real-time insights for leadership without manual data extraction.

BUILD HIGHLIGHTS

✓ 11-platform integration via REST APIs and custom automation — single unified agent interface

✓ Real-time LLM coaching engine — live call context delivered to agents at the exact right moment

✓ Compliance automation system — zero manual QA steps, full audit trail auto-generated

✓ n8n / Make / Zapier workflows deployed for active consulting clients — operational and maintained

✓ Supabase + PostgreSQL backends supporting multi-user automation systems with real-time sync

✓ Founder of SNG Cycles — e-bike brand built with AI-assisted design, documentation, and ops tooling
