## Hiring Team

AI Adoption & Change Management

Dear Hiring Team,

Most enterprise AI initiatives fail not because the technology is lacking, but because the workforce hasn't been structurally prepared to adopt it. I don't just "roll out" tools; I lead the change management required to move high-stakes operational environments from legacy manual workflows into AI-native excellence.

I am a founder-led operations expert with a proven track record of driving structural AI adoption in highly regulated sectors. My most significant achievement to date is the design and rollout of the **\*\*Complete Care Marketing (CCM) platform\*\***—an Enrollment Intelligence System that transformed a 300-person remote contact center. This wasn't just a software installation; it was a comprehensive change management project that unified eleven disparate systems into a single intelligence layer.

The CCM platform uses agentic logic to provide real-time coaching and compliance monitoring. By managing the adoption process from the ground up, I reduced new hire training ramp by 80% (from 4 weeks down to 3-5 days) and achieved 100% precision in compliance risk detection. For the organization, this translated to over \$160,000 in monthly operational savings. This is the level of impact I deliver—structural adoption that is verified by the P&L.

I'm applying for the AI Adoption Manager position because I understand the human and technical friction points that occur during a digital transformation. Whether it's M365 Copilot, ChatGPT Enterprise, or custom agentic workflows, I focus on the training, feedback loops, and stakeholder alignment required to make the technology stick. I know how to speak to agents who are afraid of being replaced, and I know how to speak to executives who need to see the ROI.

**I own the adoption outcome.** As a founder, I approach every project with extreme accountability. I don't just produce a training deck and walk away; I stay in the trenches until the system is performing at scale and the workforce is operating with high conviction. I want to bring that same level of strategic change management to your organization's AI journey.

I would welcome the opportunity to discuss my work with the CCM platform and how my approach to AI adoption can drive results for your team.

Sincerely,

**Bryan Jaworski**
