Puffy

AI Workflow Specialist

Dear Puffy Team,

Most automation projects fail not because of the technology, but because the builder didn't understand the operational stakes. I don't just build "zaps"; I architect unified intelligence layers for high-stakes business environments where compliance and conversion are the only metrics that matter.

I am a founder-led technical builder. Over the last year, I've moved beyond experimentation into deploying live agentic systems. My most significant build to date is the ****Complete Care Marketing (CCM) platform****—an Enrollment Intelligence System I designed to replace a fragmented, eleven-system manual stack in the Medicare sector. I didn't arrive at this from a computer science background; I arrived from the sales floor. I built the technology because the tools I was given couldn't keep up with the complexity of a live, compliant enrollment call.

The CCM platform uses agentic logic to monitor live conversations, detect compliance risk, and fire verbatim guidance in real-time. It integrates Sunfire, MARX, EnrollHere, and several other carrier portals into a single API-driven interface. The result: training ramp reduced from 4 weeks to 3-5 days and non-compliant enrollments were structurally eliminated. For a 300-agent team, the training savings alone exceeded \$160,000 per month.

I'm applying to Puffy because you are looking for an AI Workflow Specialist who can bridge the gap between technical automation and business outcomes. Whether it's n8n, Make, or custom REST API orchestration, I focus on building systems that are robust, verifiable, and scalable. I know what breaks in a production workflow because I've spent thousands of hours in the R&D trenches of my own businesses.

I own the build cycle. I am a developer who thinks like a founder. When a workflow isn't performing, I don't just patch the error; I find the root cause and redesign for reliability. I want to bring that same accountability and technical precision to Puffy's automation ecosystem.

I would welcome the opportunity to show you the CCM platform and discuss how my approach to agentic workflows can drive results for Puffy.

Sincerely,

Bryan Jaworski
